### 1 install

- 1.1 主要相关工具和包名:
  - setuptools
  - pip
  - virtualenv
- 1.2 目标是用 PIP お客包。好处多,如自动下载お客俗赖包
- 1.3 怎么装上 pip
- 1.3.1 路径 1:get-pip.py 法把 pip/easy install 一起紫了

#### download get-pip.py

curl https://bootstrap.pypa.io/get-pip.py -o get-pip.py python get-pip.py

#### Download get-pip.py

python get-pip.py #install or upgrade pip. Additionally, it will install setuptools and wheel python get-pip.py -prefix=/usr/local/ # 紫到指定的目录

python -m pip install –upgrade pip setuptools wheel #up to date copies of the setuptools and wheel projects are useful

pip can automatically install dependency

pip can install from either Source Distributions (sdist) or Wheels,

pip will prefer a compatible wheel.

Wheels are a pre-built distribution format that provides faster installation compared to Source Distributions (sdist), especially when a project contains compiled extensions.

#### 1.3.2 路径 2: 源包 setup.py python setup.py install

```
用源包先蒙 setuptools, 再蒙 pip
tutorial-help-install package
setuptools 包下载
PIP 包下载
解压进入目录执行,
python setup.py install
```

#### 1.3.3 路径 3:easy\_install 法

```
easy_install 下載地址
python ez_setup.py
会在 python 的名客目录中任成 scripts 目录,其中省 easy_install.exe

越后用
easy_install pip
```

easy\_install 是由 PEAK(Python Enterprise Application Kit) 开发的 setuptools 包里带的一个命令,所以使用 easy\_install 实际上是在调用 setuptools 来完成お装模块的工作。

#### 1.3.4 pip 文档链接

pip docs pip Reference Guide dependency management tutorial

#### 1.3.5 pip 命令用法

```
如果 Python2 和 Python3 同时看 pip,则使用方法如下:
python3 -m pip install XXX

pip -version
pip -help
pip install -U pip # 針 級 pip
python -m pip install -U pip
pip install SomePackage # 最新版本 pip install SomePackage==1.0.4 # 指定版本
pip install 'SomePackage>=1.0.4' # 最少版本
pip uninstall SomePackage
pip freeze > requirements.txt # 当前系统包系统
pip install -r requirements.txt
```

#### 1.4 virtualenv

#### virtualenv

virtualenv <pathName> #在pathname处建立环境,可以 -p 指定母python路径 \path\to\env\Scripts\activate.bat deactivate.bat

virtualenv docs venv docs Pipenv
